

US TOOL GRINDING & MACHINING

Custom Form Tools

US Tool Grinding & Machining is a full service tool and cutter grinding facility, from your most basic cutting tools to prototype form tools. We can reverse engineer your parts or troubleshoot and design tooling to provide the most efficient and cost effective process to help you achieve success. We are available to sharpen all types and most sizes of all High Speed and Carbide tooling.

Milling, turning & welding are offered as well.

Milling, turning and welding capabilities provide the total machine shop package. All parts can be validated on our state of the art comparator to assure accuracy.

We offer a **specialized coating service** for not only all cutting tools but also many machined parts will benefit from these processes. We will be willing to discuss this with you to determine the potential this service can provide to your company.

Although we specialize in custom form tools we also **sharpen & re-condition** all types and most sizes of cutting tools, carbide and high speed steel. All work is guaranteed, please feel free to call for estimates. We will modify or sharpen the following:

- Carbide & HSS End Mills
- (all types including ball, roughing & bullnose)
- Carbide & HSS Drills, all types
- Carbide & HSS reamers
- Taps
- Countersinks
- Counterbores
